

Poverty & Equity Brief

East Asia & Pacific

China

October 2022

In early 2021, the government of China announced the elimination of poverty in rural areas, as measured using the official poverty standard, equivalent to \$2.3/day (2017 PPP). However, using a higher poverty line, typical of upper-middle income economies such as China, in 2019 24.7 percent of the population was still living below \$6.85/day (2017 PPP), with over a third residing in urban areas.

With the adoption of the new PPP, poverty estimates for China using global poverty lines are higher than in previous editions, when expressed in 2011 PPP. However, the overall historical trends of poverty do not change.

The social agenda has now turned to a focus on achieving "common prosperity". Between 2014 and 2019, the bottom 40 percent saw their per capita expenditure grow at 7.2 percent per year, one of the highest rates in the world and 0.9 percentage points faster rate than the total population. The marked growth slowdown in 2020 and fast recovery in 2021 narrowed the urban-rural gap, as rural households saw their disposable income and expenditure grow faster than urban households. Yet, income inequality remains high, with an official income-based Gini index for 2020 at 46.8, 0.3 points higher than in 2019 and 8.6 points higher than the World Bank's consumption-based Gini for 2019.

Tackling income inequality will call for considering further relaxation of the hukou system, as well as more progressive taxation and a strengthened social protection system, that would help boost private consumption as a driver of growth. With the successive lockdowns in the past two years, urban youth unemployment has emerged as a new concern, reaching a record level of 19.3 percent in June 2022.

POVERTY	Number of Poor (thousand)	Rate (%)	Period
National Poverty Line	0.0	0.0	2020
International Poverty Line 8.8 in Chinese yuan (2019) or US\$2.15 (2017 PPP) per day per capita	2,005.0	0.1	2019
Lower Middle Income Class Poverty Line 15 in Chinese yuan (2019) or US\$3.65 (2017 PPP) per day per capita	42,395.2	3.0	2019
Upper Middle Income Class Poverty Line 28.1 in Chinese yuan (2019) or US\$6.85 (2017 PPP) per day per capita	347,987.8	24.7	2019
Multidimensional Poverty Measure		N/A	N/A
SHARED PROSPERITY			
Annualized Consumption Growth per capita of the bottom 40 percent		7.20	2014-2019
INEQUALITY			
Gini Index		38.2	2019
Shared Prosperity Premium = Growth of the bottom 40 - Average Growth		0.92	2014-2019
GROWTH			
Annualized GDP per capita growth		6.16	2014-2019
Annualized Consumption Growth per capita from Household Survey		6.28	2014-2019
MEDIAN INCOME			
Growth of the annual median income/consumption per capita		6.59	2014-2019

KEY INDICATORS

	Upper Middle Income line(%)		Relative group (%)		Multidimensional Poverty Measures: (% of population)
	Non-Poor	Poor	Bottom 40	Top 60	
Urban population					Monetary poverty
Rural population					Daily income/consumption less than US\$2.15 per person
Males					
Females					Education
0 to 14 years old					At least one school-aged child is not enrolled in school
15 to 64 years old					No adult has completed primary education
65 and older					
Without education (16+)					Access to basic infrastructure
Primary education (16+)					No access to limited-standard drinking water
Secondary education (16+)					No access to limited-standard sanitation
Tertiary/post-secondary education (16+)					No access to electricity

POVERTY DATA AND METHODOLOGY

World Bank poverty and inequality estimates for China are based on grouped (ventile) data on household per capita consumption, shared by China National Bureau of Statistics. The series for poverty and inequality experience a break in 2013, associated with a change of the sampling frame of the household survey and the inclusion of home ownership imputation in the consumption aggregate. World Bank (WB) poverty and inequality estimates differ from official estimates because of four methodological reasons: First, due to the lack of access to individual data from the official household surveys, World Bank's poverty and inequality estimates are based on grouped data. These estimates are often not as precise as direct estimates based on the full distribution of household consumption from microdata. The last year for which the grouped data were shared with the WB was 2019. Second, the official poverty line (at 2,300 renminbi per year for the rural population in 2010) is higher than the international poverty line (2017 PPP), spatially adjusted for urban/rural price differences (around 2,110 renminbi per year for rural areas for the same year, 2010). Since the declaration of eradication of poverty in early 2021, no new official poverty line has been set. Third, the official poverty estimates refer to a rural population, whereas the WB estimates refer to the total population. Fourth, WB Gini inequality estimate is based on per capita consumption whereas official Gini is calculated using per capita disposable income.

Note on new global poverty lines: Poverty data are now expressed in 2017 Purchasing Power Parity (PPP) prices, versus 2011 PPP in previous editions. As price levels across the world evolve, global poverty lines have to be periodically updated to reflect the increase of the value of the lines in nominal terms. The new global poverty lines of \$2.15, \$3.65, and \$6.85 reflect the typical national poverty lines of low-income, lower-middle-income, and upper-middle-income countries in 2017 prices. In addition to reflecting updates in nominal terms, upper-middle-income countries raised the standards by which they determine people to be poor from 2011 to 2017. Hence, the increase in the upper line is larger, and the population that does not meet the new standard is higher in most countries than it was with 2011 PPPs. See pip.worldbank.org.

HARMONIZATION

The numbers presented in this brief are based on the EAPPOV database. EAPPOV is a database of socio-economic statistics constructed using microdata from household surveys in the East Asia and the Pacific (EAP) region and is managed by the East Asia & Pacific Team for Statistical Development (EAPSTD). As of January 2022, the collection includes 21 countries and 114 surveys. Harmonized surveys in the EAPPOV database are compiled into 4 modules following Global Monitoring Database (GMD) Harmonization guidelines. A subset of the harmonized variables form the basis of the GMD collection, including the welfare aggregate which is used for Global Poverty Monitoring. Terms of use of the data adhere to agreements with the original data producers.
